MAHDI MOUSSA

Senior Full-Stack Software Engineer

+961 76 78 73 54 • Beirut, Lebanon • mahdi.m.moussa@gmail.com • linkedin.com/in/mahdi-moussa-8840381a1

SUMMARY

Senior full-stack engineer with 5+ years building Laravel and React products for logistics, e-commerce and fintech. I lead the FLM project at Wakilni and own large features end to end, from design and data modelling to releases and production support. I work well with product, operations and other engineers, and I care about clean code, solid reviews and dependable deployments. I use AI-assisted development every day: Claude Code to plan, build, test and review code, and Claude artifacts to share reports and specs with my team. I review every change myself.

WORK EXPERIENCE

Senior Full-Stack Developer — FLM PROJECT LEAD

Nov 2023 – Present

Wakilni SAL · Dekwaneh, Metn, Lebanon · Full Time · Hybrid

Senior engineer on Wakilni's delivery and logistics platform (Laravel API, React web app, driver mobile app). Lead of the FLM project.

LEADERSHIP AND RESPONSIBILITIES

- Lead the FLM project: own the technical direction, split work into tickets, estimate and plan sprints, and answer for delivery to stakeholders
- Design features before building them: database schema, API contracts, queues and background jobs, feature flags and rollout plans
- Review code for the team and mentor developers on Laravel and React best practices and design patterns such as Repository
- Manage production releases and deployments across Development, UAT and Production, including servers, databases and access
- Provide on-call support for operations, finance and customer teams; investigate production issues with Datadog logs
- Run weekly demos and training sessions for teams and departments on new features
- Work in Agile: sprint planning, daily scrums, retrospectives and post-mortems with product and cross-functional teams

KEY PROJECTS

- **WhatsApp communication tool:** built a WhatsApp Business platform that links customer chats to delivery tasks. It covers server-managed message templates with variables and buttons, media and voice notes (ffmpeg), retries with fallback phone numbers, queued webhook processing, bulk conversation start, FCM push notifications to the driver app, a chat admin panel with history, and a cost and metrics report. Covered by unit tests.
- **Cashbox (client cash settlement) module:** designed and built the module end to end. It handles cashbox creation, scheduling (weekly, monthly, every 4 weeks, holidays), linking orders and audits, settlement by cash, card and check, extra fees, CSV and PDF exports, bulk imports, and email notifications. Later led the v2 rewrite with versioned settings, a new scheduling engine, data migration from v1 and a feature-flagged rollout.
- **E-commerce integrations:** extended the Shopify and WooCommerce integrations with order sync jobs, tag-based activation, auto-fulfillment with retries, and area, zone and phone-number normalisation across Lebanon and Jordan.
- **Bulk returns:** built bulk return orders from scratch, from migrations and APIs to the React UI, with activity logs and better edit-form performance.
- **Platform upgrade:** upgraded the API to Laravel 8 and fixed the regressions in waybills, marketplace orders and Postmark emails that followed.

AI-ASSISTED ENGINEERING WITH CLAUDE

- Use Claude Code every day in the terminal and VS Code to plan features, write and refactor code, write unit tests and review changes before pull requests
- Maintain persistent Claude project memory so the agent follows team conventions from one session to the next
- Use Claude Code for load testing, capacity planning and production troubleshooting
- Publish Claude artifacts such as reports, plans and API contracts to share with developers and management

Backend Developer

Apr 2023 – Nov 2023

FOO SAL · Sin El-Fil, Metn, Lebanon · Full Time · Remote

- Collaborated on backend solutions using Laravel for fintech and banking applications
- Optimized APIs and databases for efficient data management
- Ensured code quality and reliability through best practices
- Troubleshot issues to keep systems running smoothly for users

Full-Stack Developer

May 2021 – Apr 2023

BASMA.com · Gemmayzeh, Beirut, Lebanon · Full Time · On-Site

- Implemented server-side code with the Laravel framework
- Worked closely with frontend developers to integrate backend components
- Integrated payment gateways such as Stripe, Cashew and Tabby
- Integrated third-party services such as WhatsApp, Slack, SMS gateways and Freshworks apps
- Planned, wrote and debugged web applications
- Used Linux to manage AWS EC2 instances
- Used GitLab and GitHub for version control
- Applied design patterns during implementation

Full-Stack Developer
Jan 2025 – Jul 2025

ITWORKS ME SAL · Sin El-Fil, Metn, Lebanon · Part Time · Remote

- Built the UI from scratch for an expense tracker, using Figma for design documentation
- Fixed bugs on the frontend and backend
- Implemented Google and Facebook sign-in using Firebase, the Google dashboard and the Facebook developers dashboard
- Delivered the project on schedule in 6 months

FREELANCE AND PERSONAL PROJECTS

TelGlob — Secure eSIM Profile Portal
Oct 2026

Freelance Full-Stack Developer · Remote

Designed, built and deployed a secure portal for a telecom client. Mobile network operators use it to hand over eSIM profile data (Ki/OPc keys) in place of email and WhatsApp transfers.

- Built with Laravel 13 and Inertia React
- Added end-to-end encryption in the browser: partners encrypt each batch with RSA-4096 and AES-GCM before upload, and only the admin can decrypt it, using a passphrase-protected private key that never leaves their machine
- Added invite-only accounts with mandatory two-factor authentication, partner and MNO management, a tamper-resistant audit log, and email alerts for new uploads
- Added CSV export for SM-DP+ provisioning and automatic deletion of data after 24–48 hours
- Set up a hardened Ubuntu 24.04 VPS: nginx, PHP-FPM, Supervisor queue workers, cron scheduler, Let's Encrypt TLS, UFW and fail2ban, key-only SSH, daily backups and a one-command deploy script
- Took it from requirements to production in 3 days with Claude Code as an AI pair programmer, from scaffolding, encryption and tests to provisioning and hardening the server over SSH and writing the deploy and backup scripts
- Gave the client a server purchase guide and handover documents published as Claude artifacts and PDFs, and used Claude's persistent memory to track client decisions, open questions and server state
- Gathered requirements directly with the client, ran user acceptance testing and handed the system over in production

NourMart — Shopify Online Store
Oct 2026

Personal project · E-commerce

Designed the brand and built a custom storefront for an online store selling personal care and home essentials.

- Created the brand identity (logo, icon, colour palette and typography) and an animated SVG logo for the site
- Built seven custom Liquid sections on Shopify's Horizon theme, from a hero with a floating product orbit to a full departments page, all editable in the theme editor, mobile-first and reduced-motion friendly
- Built in one day with Claude Code as an AI pair programmer, following a project guide for the theme's conventions

PROFESSIONAL SKILLS

Backend	PHP, Laravel, REST APIs, queues and jobs, MySQL, SQLite
Frontend	React.js, JavaScript, Shopify Liquid themes
AI-assisted dev	Claude Code (agentic coding, project memory, MCP integrations), Claude artifacts for reports and specs, prompt-driven planning and code review
Integrations	Shopify, WooCommerce, WhatsApp Business API, Firebase (FCM), Stripe, Tabby, Postmark
DevOps	AWS (EC2), Linux, Bash, nginx, Supervisor, GitHub, GitLab, Datadog, load testing

EDUCATION AND CERTIFICATION

Bachelor's Degree, Electronics
2015 – 2019

Lebanese University · Faculty of Sciences

A bachelor's in math, physics and programming, including low-level programming in Assembly, C and C++.

TRAININGS AND INTERNSHIPS

Software Developer · Integrated Digital Systems (IDS) · Jnah, Beirut · On-Site
Mar 2021 – May 2021

Developed and maintained a .NET project using ASP.NET Core MVC, jQuery, HTML and CSS.

AWS Practitioner · White Stork · Jnah, Beirut · On-Site
Feb 2021 – Mar 2021

Studied the main AWS services and prepared for the AWS Cloud Practitioner certification.

Full-Stack Web Development Bootcamp · SE Factory · Beirut · Remote
Sep 2020 – Jan 2021

Completed a 14-week intensive program covering cloud architecture, frontend and backend development, source control and web application security.

Financial Sales Consultant · Allianz SNA · Badaro, Beirut · On-Site
Sep 2018 – Sep 2019

Gave clients financial advice and sold insurance products matched to their coverage and investment needs.
